RE: Southeast Rockford Ground Water NPL Site
Ground Water Monitoring Results - Sampling Event #18

Dear Ms. Kolak & Mr. Williams:

The analytical results for the groundwater monitoring samples collected at the Southeast Rockford Groundwater Contamination Site (the Site) during the semi-annual monitoring event conducted in October 2007 are enclosed. This sampling event constitutes the 12th semi-annual sampling event and 18th sampling event overall for the long-term ground water monitoring element of the remedy established under the approved RD/RA Work Plan.

Sample collection and analyses were completed in accordance with the Site Field Sampling Plan and RD/RA Quality Assurance Project Plan (QAPP), as amended. Sample preparation and analyses were performed by TestAmerica of Amherst, New York consistent with US EPA CLP procedures. The analytical results were validated by NES.

The analytical results for the chemicals of concern identified in Section VI of the Site Record of Decision (ROD) are summarized in Table 1. Please note that, although vinyl chloride (VC) is not identified as a chemical of concern (COC) in the ROD for the Site, concentrations reported above the MCL of 2 µg/l are also listed in Table 1. The VC concentrations occurring above the MCL will continue to be listed in Table 1 in future reports in response to USEPA's request dated December 14, 2006.

The historical analytical results for samples collected from the Site ground water monitoring network by monitoring well location are presented in Table 2. The validated laboratory data sheets and data quality summaries are also provided in Appendix A. The VOC concentrations for the Site COCs, as the sum of the total VOCs, are provided in Table 2. The total VOC concentrations reveal general trends at each monitoring location. In brief, the historical data for total VOCs indicates the following:

1. Total VOC concentrations have generally decreased across the Site since inception of the long-term monitoring program in March 1999, with the exception of certain monitoring locations located immediately down gradient of identified source areas as presented below.
 - o Total VOCs in ground water monitoring locations near source Area 7 were lower than the prior sampling event in November-January 2006/2007 with the exception of MW-101D, MW-102A, MW-102C, MW-113A, and MW-133B.

SE Rockford NPL Site

Groundwater Monitoring Results-Sampling Event #18

Page 2

- Total VOCs in ground water monitoring locations near source Area 9-10 were lower than the prior sampling event in November-January 2006/2007 at MW-201 and MW-202.
 - Total VOCs in ground water monitoring locations near source Area 4 and Area 11 were either generally consistent or moderately lower than the prior sampling event in November-January 2006/2007.
2. The ratios of parent VOC compound concentrations with associated breakdown product concentrations appear to indicate that natural attenuation is occurring at the Site.
 3. Total VOC concentrations at monitoring locations proximate to the Rock River are generally constant or decreasing.
 4. A ground water sample was not collected from MW-101C during the recent sampling event due to ongoing access issues at that location. The NES field representative has been in contact with Tom Williams, IEPA regarding resolution of the access issue.

Please contact me at telephone 303-232-2134 if you have any questions regarding the information provided or require any additional information.

Sincerely,

William B. Dotterer,

William B. Dotterer,
Sr. Project Manager

cc: Wally Parson, City of Rockford

APPENDIX A
Ground Water Monitoring
Laboratory Data Sheets

Data Quality Control Criteria Review Summary

SDG Number: Oct07

Project Number: NY7A9731

Site: SE Rockford, 18th Event

Contractor Lab: TestAmerica (Amherst, NY)

Validator: Brian LaFlamme

Validation Date: November 14, 2007

Sample Matrix: Water

Sample Date: 10/07/07 & 10/08/07

Analytical Methods: EPA 3/95 CLP Volatiles (OLC02.1)

Sample Designations:

FD-1	FD-2	MW133B	MW133C	MW136	MW200	MW201
MW202	MW203	MW204	MW205A	MW205B	MW206A	MW206B
MW206C	MW207	MW101A	MW101B	MW101D	MW102A	MW102B
MW102C	MW113A	MW113B	MW114A	MW114B	MW117B	MW117C
MW117D	MW119	MW121	MW124	MW130	MW133A	MW16
MW47	Trip Blank					

The analytical data were reviewed in accordance with the analytical methods and the Environmental Protection Agency (EPA) Contract Laboratory Program (CLP) National Functional Guidelines. The review included comparing quality control (QC) values provided on the laboratory QC forms to method QC criteria. Review of the raw data was not performed.

Quality Control Summary

QC Review Item	VOA	
Completeness	X	
Case Narrative	X	
Chain of Custody (COC) Forms	X	
Sample Preservation	X	
Holding Times	X	
Laboratory Blank Results	I	
System Monitoring Compounds (Surrogate) Results	X	
Laboratory Control Sample (LCS) Results	X	
Matrix Spike/Matrix Duplicate (MS/MSD) Results	NA	
Initial Calibration Results	X	
Continuing Calibration Results	X	
Internal Standards	X	
Method Specific QC Results *	X	
Contract Required Quantitation Limits (CRQL)	X	
Tentatively Identified Compounds (TICs)	X	
System Performance	X	
Field QC Results #	X	
Other	X	

X Acceptable, no qualification necessary NR Not required

See validation summary comment NA Not applicable

*) The reviewer has indicated in the comments the method specific QC results included in the data package that were reviewed.

#) Field QC may include field duplicates, trip blanks, rinse blanks, field blanks, and equipment blank samples as required by project specific criteria

Data for the above samples are:

- Acceptable for use
- Acceptable for use as qualified
- Unacceptable for use

Is action required by the Project Manager?

Yes No

Data Validation Summary Comments

1. Methylene Chloride was detected in two of the laboratory method blanks. Samples for which the concentration in the sample was less than 10X the concentration in the blank are MW206B DL (diluted sample), MW206C DL (diluted sample) and MW114A DL (diluted sample). These results were qualified "U" at the CRQL. The remaining diluted samples had concentrations greater than 10X the concentration in the blank and were not qualified. However, the undiluted samples did not report any detections of methylene chloride.

Overall Assessment of Data

Based on the review of the quality control criteria, the method appeared to be in control. Therefore, the data are acceptable for use as qualified.
